

# Web's Medical Device Transfer Process: An Overview

Manufacturing your medical diagnostic devices and getting them into the hands of those who need them doesn't have to be a daunting task. You need a partner who specializes in high-tech scalable production solutions backed by a structured method for evaluating, transferring, and validating the commercialization process.

**Here's how Web Industries does that:**

## 1 | Feasibility Evaluation

We collaboratively develop a shared knowledge base, discuss the project scope, and discover your vision for the product. This is when we determine if our goals, cultures, and capabilities are aligned.

## 2 | Project Definition & Planning

Documenting the project requirements, our risk assessments, cost matrices, expected timelines, and design transfer reviews all guide the creation of a detailed project plan.

## 3 | Technical Transfer, Process Verification & Process Validation

During technical transfer to our facilities, every aspect of the product is vetted against our "design for manufacturability" goals. After initial trials, optimized procedures are fully documented, and verification trials confirm that the manufacturing processes, supply chain vendors, and quality assurance systems are ready for validation and commercialization.

## 4 | Commercial Production

Once commercial production begins, we constantly examine our systems, processes, and suppliers to drive out waste and ensure that our automated platforms produce devices that meet or exceed your expectations for low CV, high quality, and consistent medical products.

Utilizing the latest automated technologies combined with in-house biochemistry preparation, rigorous quality systems, and the innovative process transfer procedures outlined above, Web Industries provides outsource manufacturing services that are designed for high-volume production of medical devices.

Put us to  
**work for you.**

We're already helping leading medical companies get their innovative devices into the hands of those who need them the most. And we stand ready to do that same for you.

**Call us at 508.573.7979 to discuss the possibilities.**
